

Automated 500-Request Load Test Guide (120-Second Pacing Interval)

Target Endpoint:
https://blu-mauve-theta.vercel.app/api/webhook/whatsapp

Pacing Rate: 1 request / 120s (2 minutes)

Total Volume: 500 Requests (250 / team member)

Meta API Version: WhatsApp Cloud API v19.0

1. System Overview & Use Case Summary

Blu_bot is a customer service and sales automation platform that integrates directly with the Meta WhatsApp Cloud API. It enables small businesses to automatically reply to incoming customer product inquiries, provide inventory stock levels and pricing information in local currency (**K**), and escalate complex requests to human support representatives.

2. Team Execution Instructions (500 Requests Total)

To fulfill Meta's developer API volume benchmark, the test workload is split equally between 2 team members (250 requests each at 120-second intervals).

■ Team Member 1 (Requests 1 to 250):

```
node scripts/simulate_webhook_traffic.mjs --count 250 --member 1 --interval 120
```

■ Team Member 2 (Requests 251 to 500):

```
node scripts/simulate_webhook_traffic.mjs --count 250 --member 2 --interval 120
```

■ Single Machine Option (All 500 Requests):

```
node scripts/simulate_webhook_traffic.mjs --count 500 --member 1 --interval 120
```

3. Script Features & Resilience

Feature	Specification Detail
Pacing Interval	Executes 1 request every 120 seconds (2 minutes).
Customer Dataset	Rotates through 50 realistic customer prompts (pricing in Kwacha K, stock queries, store hours, h
State Persistence	Saves state automatically to scripts/test_progress_memberX.json. Supports pause (Ctrl+C) and c
Live Sync	Real-time updates visible on Conversations (/conversations) and Activity Log (/audit-log) dashboa
